

Fecal calprotectin

The emission of the stool must be spontaneous without using suppositories and/or laxatives. In the week before the collection, suspend astringent, coal and bismuth..

Sampling procedure

- Use sterile containers with collecting paddle.
- Gather in 3 different regions a small amount of stool with the paddle and enter it in 3 containers without any preservatives.
- The sample thus collected should be stored in a refrigerator and delivered within 24 hours.
